

The City of Jackson is proud to present the 2016 Annual Water Quality Report for all City of Jackson customers, including Blackman Township and the State Prison of Southern Michigan. In complying with the Federal legislative requirements, this report has been developed to provide you with valuable information about your drinking water. State and Federal regulations require us to test our water on a regular basis to ensure its safety. We met all the monitoring and reporting requirements for 2016. You will see as you review this report that your drinking water meets or exceeds all government standards set for water quality and safety.

This report will explain where your water comes from, it lists the results of testing conducted at the water treatment plant and in the water distribution system and it contains important information about water and health. This report also provides information on how you can minimize contaminants in our source water.

Please help us to preserve the quality of our drinking water supply. If at any time you notice a change in the look, smell or taste of your drinking water, please contact the City of Jackson Department of Public Works-Water Division at (517) 788-4170.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at (800) 426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, natural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and minerals, which are naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharge, gas production, mining or farming.
- **Pesticides and herbicides**, which may come from a variety of sources, such as agriculture, urban storm water runoff and residential uses.
- **Organic chemical contaminants**, including synthetic volatile organics, which are by products of industrial processes and petroleum production, and can also come from gas stations, urban storm runoff and septic systems.
- **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations, which limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Where does my water come from?

The City of Jackson water system is supplied by ground water pumped from 16 wells. The wells are located in two separate well fields to ensure a safe water supply is available in the unlikely event contaminants were to enter one of the well fields. Water is pumped from the wells to the water treatment plant, where it is softened with a lime/soda ash process. The hardness is reduced from about 475 parts per million (ppm) to about 140 ppm. It is then filtered, disinfected, and transferred to a 7.5 million gallon storage reservoir and from there pumped to our customers through the distribution system.

Source Water Assessment

The State of Michigan performed an assessment of our source water in 2003 to determine the susceptibility to, or the relative potential of contamination. The susceptibility rating is on a seven-tiered scale from "very low" to "very high" based on geologic sensitivity, water chemistry, and contamination sources. The susceptibility of our source is "moderately high". The susceptibility determination may be altered in the future as the City demonstrates that an active Wellhead Protection Program is supporting the management and control of existing and potential sources of contamination in the Wellhead Protection area. In an effort to do so, the City of Jackson participated in a countywide endeavor to protect our drinking water and has developed a Wellhead Protection Program. The City has identified the ground water recharge areas for municipal wells, the potential sources of contamination, and has provided recommended actions to prevent contamination from entering the ground water.

Lead and Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for young children. Lead in drinking water can come from lead-based pipes and components and from service lines that connect homes to the main. The City of Jackson and Blackman Township and the State Prison of Southern Michigan are responsible for providing the quality of the water, but cannot control the variety of materials in the pipes and components. When your water has been sitting in pipes or containers for hours, you can minimize the potential for lead exposure by flushing the tap for 30 seconds to 2 minutes before using the water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Important Health Information

Some people may be more vulnerable to contaminants in drinking water than is the general population. Immuno-compromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

Sampling Results

During the past year hundreds of water samples were taken in order to determine the presence of any biological, inorganic, volatile organic,

or synthetic organic contaminants. The table below shows only those contaminants that were detected in the water. The State allows us to monitor for certain substances less than once per year because the concentrations of these substance do not change frequently. In these cases, the most recent sample data are included along with the year in which the sample was taken. Total Trihalomethanes, Total Haloacetic Acids, and Lead and Copper samples were collected from sites throughout the community. All other regulated substances were collected at the water treatment plant tap.

2016 Regulated Detected Contaminants Tables

Contaminant	Test Date	Units	Health Goal MCLG	Allowed Level MCL	City of Jackson			State Prison of Southern Mich			Violation yes/no	Major Sources in Drinking Water
					Level Detected	Range of Detection	Level Detected	Range of Detection	Level Detected	Range of Detection		
Inorganic Chemicals – Annual Monitoring at Water Tap												
Fluoride	6/15/16	ppm				N/A	N/A	N/A	N/A	N/A	no	Erosion of natural deposits; Water additive, which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Selenium	6/15/16	ppm	10	10		N/A	N/A	N/A	N/A	N/A	no	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Barium	6/15/16	ppm		2	0.1	1-15	N/A	N/A	N/A	N/A	no	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
trans-cis-1,2-dichloroethene	11/15/16	ppb		10	0.10	0.5-19	N/A	N/A	N/A	N/A	no	Discharge from industrial chemical factories.
	2016	PCi/L	5		1.8	1.4-1.9	N/A	N/A	N/A	N/A	no	Erosion of natural deposits
	6/15/16	ppm	N/A	N/A	107	N/A	N/A	N/A	N/A	N/A	no	Running/leaching from natural deposits
	6/15/16	ppm	N/A	N/A	92	N/A	N/A	N/A	N/A	N/A	no	Running/leaching from natural deposits; industrial wastes
Disinfectant Residuals and Disinfection By-Products – Monitoring in Distribution System												
Trihalomethanes (THM)	Feb-Dec 2016	ppb	n/a	80	46	21-29	51	32-62	57	40-57	no	By-product of drinking water chlorination.
Haloacetic Acids (HAA5)	Feb-Dec 2016	ppb	n/a	60	6	3.0-8.0	6.25	6.25-8.0	7	6-7	no	By-product of drinking water disinfection.
Disinfectant (Total Chlorine Residual)	Jan-Dec 2016	ppm	MR DG L 4	MRDL 4	1.13	1-1.28	1.37	1.0-1.47	1.55	1.11-1.98	no	Water additive used to control microbes.

Contaminant	MCLG	MCL	Level Detected	Source of Contamination
Sodium (ppm)	n/a	n/a	71	Erosion of natural deposits

2016 Turbidity – monitored every 4 hours at Plant Finished Water Tap			
Highest Single Measurement Cannot exceed 1 NTU	Lowest Monthly % of Samples Meeting Turbidity Limit of 0.3 NTU (minimum 95%)	Violation yes/no	Major Sources in Drinking Water
0.27 NTU	100%	no	Soil Runoff

Turbidity is a measure of the cloudiness of water. We monitor it because it is a good indicator of the effectiveness of our filtration system.

2014 Lead and Copper Monitoring											
Contaminant	Test Date	Health Goal MCLG	Action Level AL	City of Jackson		Blackman Twp		State Prison of South Michigan		Violation yes/no	Major Sources in Drinking Water
				90 th Percentile Value*	Number of Samples Over AL	90 th Percentile Value*	Number of Samples Over AL	90 th Percentile Value*	Number of Samples Over AL		
Lead (ppb)	2014	0	15	2	0/30	0	0/20	2	0/20	no	Corrosion of household plumbing system; Erosion of natural deposits.
Copper (ppb)	2014	1.3	1.3	0	0/30	0	0/20	0	0/20	no	Corrosion of household plumbing system; Erosion of natural deposits; Leaching from wood preservatives.

*The 90th percentile value means 90 percent of the homes tested have lead and copper levels below the given 90th percentile value. If the 90th percentile value is above the AL additional requirements must be met.

For more information

For more information, to obtain extra copies of this report, or for any questions relating to your drinking water, please call the City of Jackson Department of Public Works – Water Division at (517) 788-4170, visit the City of Jackson website at www.cityofjackson.org or call the U.S. EPA's Safe Drinking Water Hotline at (800) 426-4791 or visit the EPA website at www.epa.gov/safewater/. The Jackson City Council meets on the second and fourth Tuesday of every month at 6:30 pm. The Blackman Township Board meets on the first Monday of every month at 6:00 pm.
